**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 15-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Banerjea et al. (US Pat# 6,240,128, cited by applicant).

Regarding claim 15, Banerjea teaches an echo canceler apparatus in (see figs.1-2) with a precoder (102), a modulator (103), a decimator (114) because an interpolator can downsize/upgrade a signal sample and an echo canceling system comprising of a first echo canceler and a second echo canceler with a separation circuit which includes an adaptive equalizer circuit and a slicer.

Regarding claims 16-20, Bannerjea teaches a first and second echo canceller, a slicer/equalizer circuit and filtering.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any

Art Unit: 2643

inventions covered therein were made absent any evidence to the contrary.

Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 22-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Banerjea et al. (US Pat# 6,240,128).

Regarding claim 22, Banerjea teaches an echo canceler apparatus in (see figs.1-2) with a precoder (102), a modulator (103), a decimator (114) because an interpolator can downsize/upgrade a signal sample and an echo canceling system comprising of a first echo canceler and a second echo canceler with a separation circuit which includes an adaptive equalizer circuit and a slicer. Banerjea fails to teach the subject matter including a modem apparatus including a framer.

It's notoriously well known in the art to have framers in communication devices and therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching of Banerjee into that of any communication device in order to enhance signal clarity and reduce noise.

Regarding claims 23-28, Banerjea teaches a first and second echo canceller, a slicer/equalizer circuit and filtering.
